

5. PROJECT DEVELOPMENT

Salesforce Account

- Create and activate a Salesforce Developer account, then access the Salesforce Setup page.

Custom Objects

- Customer__c – customer personal and contact information.
- Shipment__c – parcel details, source, destination and tracking information.
- Delivery_Agent__c – delivery agent profiles and branch details.
- Branch__c – courier branch offices.
- Delivery_Update__c – status updates for shipments.
- Invoice__c – billing details for delivered shipments.

Fields & Relationships

- Customer fields include Email, Phone, Address, Customer Type, City, State, Pincode and Is Active.
- Shipment fields include Customer, Source Address, Destination Address, Weight, Price, Status, Expected Date, Assigned Agent and Shipment Type.
- Delivery Agent, Branch, Delivery Update and Invoice objects contain the fields specified in the project document.

Validation Rules

- Email required; phone must be 10 digits; pincode must be 6 digits.
- Shipment weight and price must be greater than zero.
- Expected delivery date cannot be in the past.
- Delivery-agent email must be valid; branch code is mandatory.
- Remarks are required when a delivery update is marked Delayed.

Automation & App

- A record-triggered Flow updates Shipment Status when a Delivery Update is created.
- The Lightning App contains Customer, Shipment, Delivery Agent, Branch, Delivery Update, Invoice, Reports and Dashboards.

Reports & Dashboard

- Shipment Status Summary, Agent Performance Report and Revenue by Branch Report.
- Dashboard components include a donut chart for shipment status, bar chart for agent performance, and column chart for revenue by branch.
