

6. PROJECT TESTING

Functional Testing

- Testing verifies record creation, validation-rule enforcement, delivery status updates, flow automation, invoice generation and dashboard visualization.

Testing Areas

- Customer record creation and required-field validation.
- Shipment creation with valid weight, price, status and expected date.
- Delivery update creation and automatic shipment-status update.
- Invoice creation and payment-status verification.
- Reports and dashboard component verification.

Expected Result

- The documented test scenarios are intended to verify correct performance and reliability of the implemented Salesforce solution.
